NMAP TO DISCOVER LIVE HOST USING ARP AND ICMP, TCP/UDP PING SCAN IN TRY HACK ME ALGORITHM

Aim

to learn how to use nmap to discover live host using diff scans.

Procedure

1) start tryhackme machine
2) identify target IP Address
3) perform ARP scan
4) perform TCP ping scan
5) perform UDP ping scan
6) record the results

config router

open router > CLI & enable

config terminal

interface gigabit ethernet 0/1

ip address 200.1.1.1

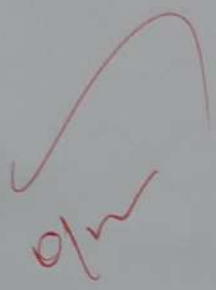

ip not outside

no shutdown

exit

```
Sender Window (size = 4)
Sending frame 0 ... ACK received
Sending frame 1 ... ACK received
Sending frame 2 ... ACK received
Sending frame 3 ... ACK received
--- Window slides ---
Sending frame 4 ... ACK received
Sending frame 5 ... ACK received
Sending frame 6 ... ACK received
Sending frame 7 ... ACK received

Simulation completed successfully.
```

config static NAT

ip nat inside

static 192 - 168.1.10

config dynamic NAT

ip, pool my pod 200.1.1.20.200.1.1

test NAT

from PC1 open command prompt

→ type ping

Result

Thus the NAT was successfully configured.
