WRITE A CODE USING RAW SOCKETS TO IMPLEMENT PACKET SNIFFING

Aim

To write a code using RAW sockets to implement packet sniffing

Algorithm

- create raw socket
- bind it to network interface
- receive packets continuously
- display protocol

Input

network packets received through network interface

code

```
import socket
s = socket.socket (socket.AF_INET, socket.SOCK_RAW,
                   socket.IPPROTO_IP)
s.bind ("0.0.0.0", 0)
print ("packet switch started...")
while true
    packet.address = s.recvfrom(65535)
    Round ("Source IP: ")
    print ("packet length:", len(packet))
    print ("-" * 30)
```

output

packet switch started
source IP : 192.168.1.1.10
packet length : 74

o/w

Result

The the program for raw sockets was success fully implemented.
