16/7/24 EXP NO: 3

STUDY OF DIFFERENT TYPES OF CABLES AND CRIMPING OF CABLE WITH RJ45 CONNECTOR

Aim

To study different types of cables and the crimping of cable with RJ45 connector

Types of network cables

CABLE TYPE	DESCRIPTIION
1) UTP (unshielded twisted pair)	commonly used for ethernet LAN's and office networks
2) STP (Shielded twisted pair)	used in area with high electrical or electromagnetic interference
3) coaxial cable	used for cable television, broadband internet and cctv systems.
4) optical fibre cable	used for high-speed, high bandwidth and long distance communication

Crimping Procedure

1) cut the UTP cable to the required length
2) strip about 2-3 cm of the outer insulation
3) untwist and strenghten the wires.
4) arrange the wires according to the T5 68B standard
5) Trim the wire ends evenly.
6) insert the wires into the RJ45 connector
7) crimp the connector using a crimping tool
8) test the cable using a LAN cable ~~con~~ tester.

Observation:

i) the wires were arranged according to the T5 68B standard.

ii) The RJ45 connector was crimped successfully.

iii) The cable tester indicated proper connectivity

iv) cable was ready for network communication

Result

16/7/24 The diff types of cables were studied & the UTP cable was successfully terminated using RJ45 connector
